# Using 2-Wire Smoke Detectors With The UNO IP Panel

While the use of 4-Wire smoke detectors is preferred, the UNO IP Panel can support the use of **2-Wire** smoke detectors as per **Figure 1**. See notes below diagram.

<u>Figure 1</u>

NOTES

- Any on-board zone can be used. The zone definition should be either **24 Hour 2-Wire Instant Fire** or **24 Hour 2-Wire Delay Fire**
- Either PGM 1 or PGM 2 may be used and should be set to **Smoke Reset (4 seconds off).**
- 2-Wire smoke detectors are supervised on the UNO. Be advised that a fault or tamper of the wiring will generate an alarm, and not a tamper.
